

Kenworth C500 Offers Two New Hoods, Larger Cooling Module for 2010

**Increases GCW Capacity
Up To 200,000 Pounds**

KIRKLAND, Wash. – The rugged Kenworth C500 vocational model has received a new, larger cooling module and hood facelift for 2010.

The tough, durable Kenworth C500, which is designed to handle heavy loads over rough terrain, is ideal for demanding applications, including heavy haul, oilfield services, coal mining and construction. The increased size of the cooling module enhances the C500's ability to cool in harsh environments, ranging from desert sands to high-altitude stationary applications.

The new 2010 C500 hood, which is available either in fiberglass or extremely durable sheet metal, accommodates the new 1,780 sq. in. cooling module. This improved cooling capacity allows Kenworth to offer the C500 across-the-board for gross combination weights (GCW) up to 200,000 lbs. The increase also allows stationary pumping with the maximum horsepower and torque available, which is 600-hp and 2,050 lb-ft, respectively.

The Kenworth C500 is available with a standard day cab, Kenworth Extended Day Cab, 38-inch AeroCab® FlatTop sleeper, and 42-inch modular sleeper. The spacious Kenworth Extended Day Cab enhances driver comfort with an additional 6 inches of length and 5 inches of cab height compared to Kenworth's traditional day cab. The Extended Day Cab also offers 2 more inches behind the wheel, additional leg room, up to 21 degrees of recline in the driver's seat, and 2 extra cubic feet of storage behind the driver's seat.

Kenworth Truck Company is the manufacturer of The World's Best® heavy and medium duty trucks. Kenworth is an industry leader in providing fuel-saving technology solutions that help increase fuel efficiency and reduce emissions. The company's dedication to the green fleet includes aerodynamic trucks, compressed and liquefied natural gas trucks, and medium duty diesel-electric hybrids.
